U.S. Marine Corps Hotel Completed Using Ecolite's High Performance Wall System

Tuesday, June 9, 2009

The United States Marine Corps Base at Camp Pendleton, California unveiled its \$15 million Temporary Lodging Facility on June 1, 2009 at a ceremonial ribbon cutting. The Temporary Lodging Facility is the flagship design of a four story hotel which may be duplicated at military bases around the country. The facility, constructed by Design-Build Contractor, [RQ Construction](#), of Carlsbad, California, was completed in only eight months.

RQ Construction selected the [Ecolite](#) high performance wall system for the interior and exterior walls of the state-of-the-art, 4-story, 64,000 square foot, 69 room hotel. The Ecolite panels were manufactured off-site and delivered "just-in-time". As a result, the wall system was erected in only three months, allowing the hotel to be opened 3-4 months earlier than had it been built with traditional building materials.

George Rogers, CEO of RQ Construction noted, "Ecolite panels enabled us to cut a significant number of months from the construction schedule, greatly improve the quality of the lodge, and contribute significantly to the LEED Silver designation."

The Ecolite technology enables rapid construction using [the high performance, sustainable, panelized wall system](#). The panels are a hybrid technology ideally suited for commercial and industrial building. The innovative technology is currently being licensed in North America and Internationally.

About RQ Construction, Inc.

RQ Construction, Inc. is a leading player in Southern California's commercial and governmental construction economy. Headquartered in San Diego County, the privately held company is a full-service construction company with architectural design capabilities. RQ Construction strives to provide customers the best built environment while being the first choice of all stakeholders.

About Ecolite Concrete USA, Inc.

Ecolite Concrete USA, Inc. is the inventor and licensor of an innovative pre-engineered structural wall system. Ecolite's patent-pending system combines cold-formed steel studs and proprietary light weight concrete, resulting in a panelized wall system that can be rapidly deployed into building projects. Ecolite walls are a "Green" building material and can assist in earning several LEED Credits.
