ECOLITE WALL PANELS BEGIN INSTALLATION AT CAMP PENDLETON'S NEW TEMPORARY LODGING FACILITY

Monday, October 27, 2008

Carlsbad, Ca - Ecolite Concrete USA's light weight concrete and steel stud wall panels continue to gain traction within the US Department of Defense as another significant "Ecolite" building begins to take shape. With speed, cost efficiency, and sustainability driving the specification for building products, Ecolite walls are delivering significant performance, value and scale to meet these demands. RQ Construction, of Carlsbad, Ca, (one of the nation's prominent Department of Defense contractors) was awarded the Design Build facility by the US Navy and has chosen Ecolite as its source for pre-fabricated walls.

George Rogers, CEO of RQ Construction remarked, "The Temp Lodge Facility (TLF) was the perfect opportunity to apply the Ecolite StudCast wall system. Our customer needed a building that cost less so that they could get first class furniture and fixtures, and they needed it fast. Ecolite gave us both and is helping us design it to a LEED Silver level. A lodge like this would normally take 12-14 months to build and we plan to do it in 8 months."

Because Ecolite wall panels are engineered to the designer's specification and fabricated in a controlled manufacturing facility, nearly all of the TLF walls have been completed prior the start of installation. This flagship hotel will utilize more than 600 Ecolite wall panels, totaling more than 64,000 square feet, and is designed to be replicated on military bases across the United States. The TLF will provide housing and accommodations to families and friends of those serving in the military. By deploying Ecolite wall panels, RQ Construction estimates a reduction in their total build time by 35% compared to using traditional building methods. TLF's engineering includes collapse prevention and blast resistant criteria. However, the hotel will look and feel much like newer commercial hotels, except with exceptional strength and safety qualities.

About Ecolite Concrete USA, Inc.

Ecolite Concrete USA, Inc. is the inventor and licensor of an innovative pre-engineered structural wall system. Ecolite's patent pending system combines cold formed steel studs and proprietary light weight concrete to achieve a panelized wall in rapid time. Ecolite walls are a "Green" building material and eligible for LEED Credits in 4 categories.

Headquartered in Carlsbad, CA, the company is privately held. The product is manufactured exclusively by

Ecolite's licensees. For additional information, please visit the Ecolite Website at www.ecoliteconcrete.com.
